AJIO ALTAIR

PART A: MID EVALUATION
DIS, 2026

PRESENTED BY :
Prarthna Sharma

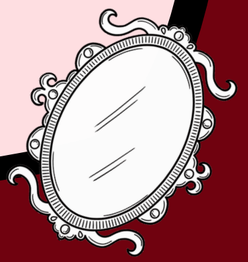

PROBLEM STATEMENT

Users on fashion platforms like Ajio struggle with choice overload, inability to visualize fit and style on themselves, and lack of integrated social validation, leading to indecision, cart abandonment, and high return rates.

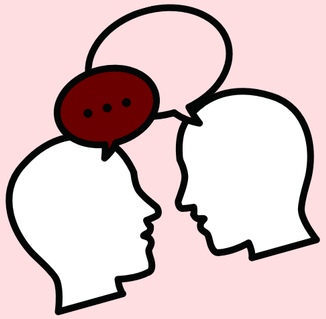

PROPOSED SOLUTION STATEMENT

Design a hyper-personalized, AI-powered “Magic Mirror” experience that enables virtual try-on, real-time style recommendations, and collaborative decision-making (Style Crew) to transform shopping from search-based browsing to confident, social, and discovery-driven interaction.

AFFINITY MAPPING

SAYS

- There are too many options, I get confused.
- I don't know if this will look good on me.
- I usually ask my friends before buying.
- I wish I could see how this looks on me.

THINKS

- Will this suit my body type and skin tone?
- What if it looks different in real life?
- Is this worth the price?
- Should I buy this or keep looking?

DOES

- Scrolls endlessly through products
- Opens multiple tabs / compares items
- Sends screenshots/ links to friends
- Adds to cart but delays checkout

FEELS

- Overwhelmed by too many choices
- Uncertain about fit and appearance
- Frustrated when expectations don't match reality
- Dependent on others for validation

PATTERNS / INSIGHTS

- **CHOICE OVERLOAD → DECISION FATIGUE → DROP-OFF**
  Too many options overwhelm users, causing them to abandon decisions.

- **VISUALIZATION GAP → LOW CONFIDENCE → DELAY**
  Inability to imagine fit/look leads to hesitation and postponed purchases.

- **HIGH DEPENDENCE ON SOCIAL VALIDATION → BROKEN FLOW**
  Users leave the app to seek opinions, disrupting the buying journey.

- **OUTFIT-LEVEL THINKING VS PRODUCT-LEVEL DESIGN**
  Users think in complete looks, but platforms present isolated items.

- **FEAR OF MISMATCH → HIGH RETURN INTENT**
  Uncertainty about fit and appearance increases likelihood of returns.

SYSTEM & INFORMATION ARCHITECTURE

SYSTEM ARCHITECTURE DESIGN

- **Frontend: React + TypeScript**
  → Modular, scalable UI
- **Backend: Firebase Realtime Database**
  → Real-time sync
- **AI Layer: Gemini API**
  → Personalized recommendations
- **State: React Hooks + Firebase**
  → Fast, consistent state

INFORMATION DESIGN

- **Hierarchical Navigation**
  → Reduced cognitive load
- **Faceted Classification**
  → Efficient filtering
- **Tags (AI + User)**
  → Better personalization
- **Secondary Navigation**
  → Quick refinement

DATABASE DESIGN

- **Entities**: Users, Products, Social Sessions, AI Data
- **Relationships:** One-to-many (user → outfits), many-to-many (users ↔ sessions)
- **Structure**: Categories → Subcategories → Items
  → Ensures scalable and structured data retrieval

INTERFACE & INTERACTION DESIGN

VISUAL INTERFACE DESIGN

- **Component-based system (Atomic Design)**
  → Consistent, reusable UI
- **Design Tokens: Color, typography, spacing**
  → Visual consistency
- **Responsive Grid (Mobile-first)**
  → Mobile optimized
- **Gestalt Principles**
  → Better visual grouping

SOCIAL NAVIGATION ARCHITECTURE

- **Real-time collaboration (Style Crew)**
  → Shared decisions
- **Social Translucence**
  → Visible user activity
- **Crowdsourced Recommendations**
  → Peer validation
- **Navigation (bars, breadcrumbs, menus)**
  → Seamless flow

INTERACTION DESIGN

- **UI:** Cards, grids, modals, filters
- **Inputs:** Sliders, checkboxes, dropdowns
- **Feedback:** Validation, error handling
  → Smooth interaction

DIS CONCEPTS APPLIED IN PROJECT

Human Information Processing

Recognition over recall
Used in: Visual product cards, simplified navigation

Perception (Gestalt Principles)

Proximity, similarity
Used in: Product grouping, UI layout

Social Navigation

Social translucence, collaborative interaction
Used in: Style Crew (real-time group decisions)

Error Prevention & Recovery

Preventing slips, easy correction
Used in: Input validation, undo actions

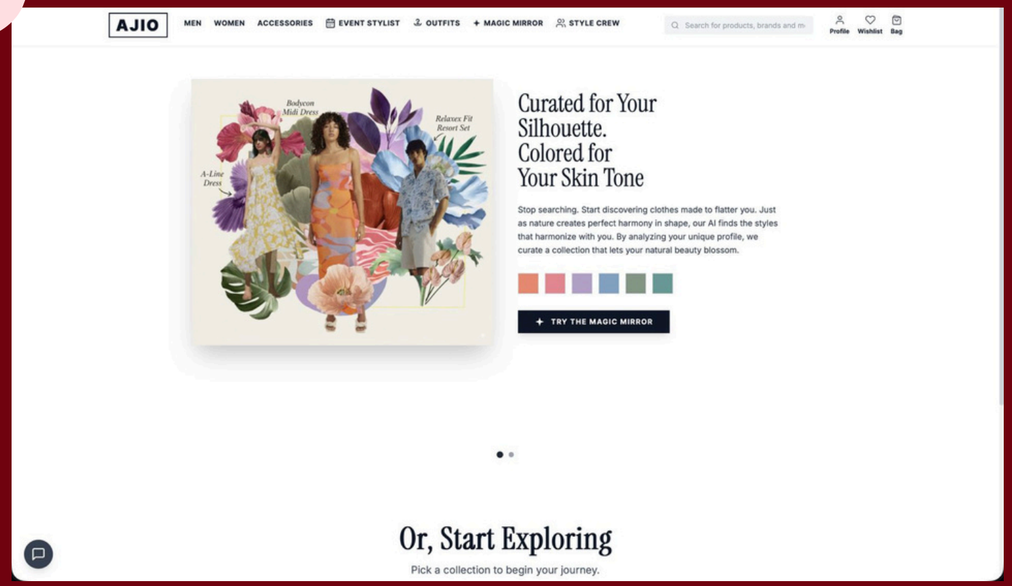

Multi-modal Interaction

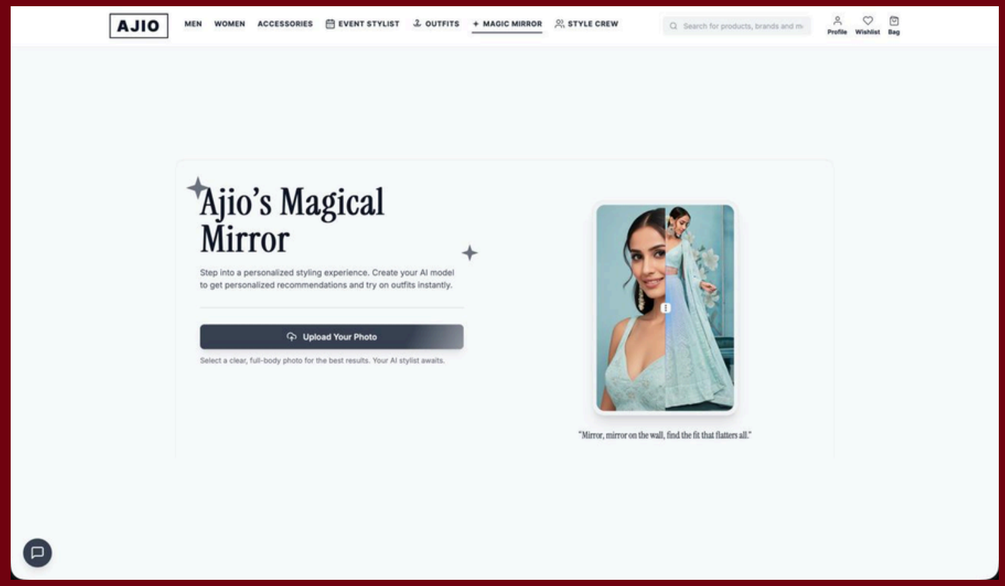

Image + text + touch inputs
Used in: Virtual try-on + chatbot

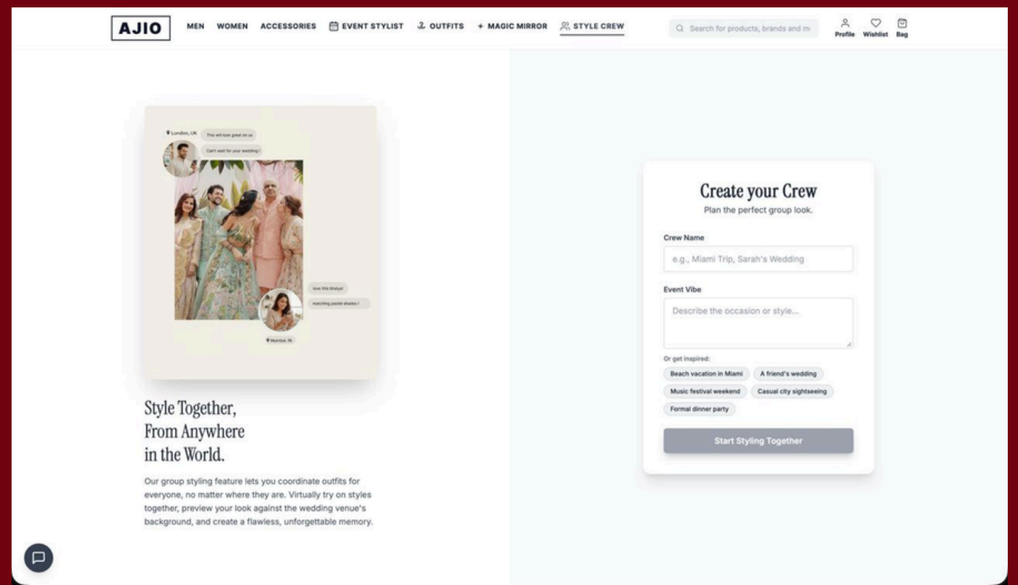

Human Communication

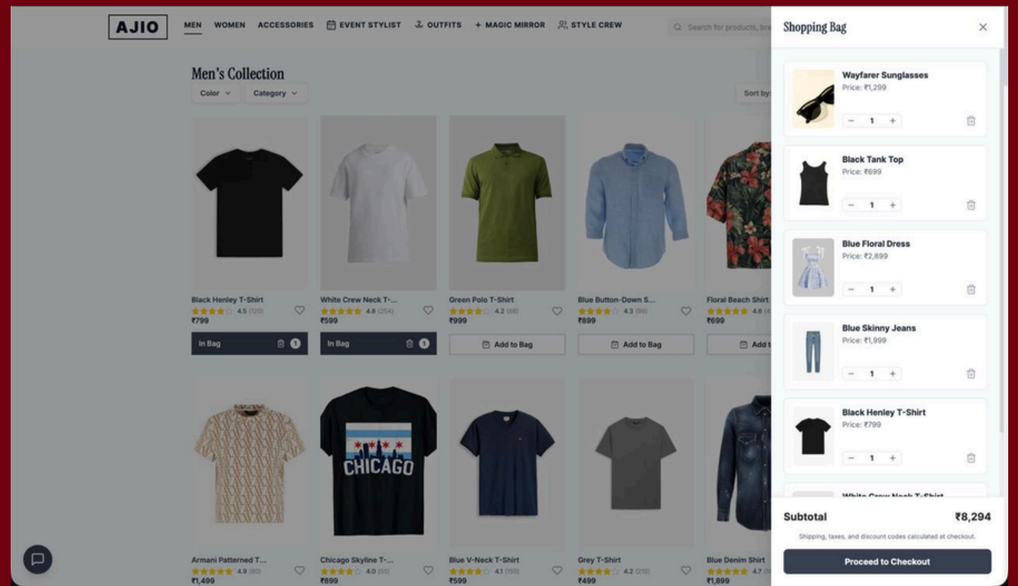

Verbal + non-verbal cues
Used in: Chat + visual feedback/animations

WIREFRAMES
